

## **Leads Generator Mod**

### Description:

This fully functional leads mod lets your visitors fill out a designed form to find businesses within a certain mile radius (set by you) if you have the PMD zip code radius module OR by location without the zip code module. The user chooses the categories and fills in their contact information. The contact information is then e mailed to the listings in the selected categories along with an e mail back to the user, telling them the listings that got the information along with the listings web site address. In the listing owners control panel, they can view all of the leads that have been sent to them. The site administrator can also view all of the leads and archive, edit, or delete any leads. The query can be modified to use states instead of zip codes and can also be modified to only include certain membership levels.

This mod is great for bridal directory leads, requests for quotes for the service industries, or any other type lead generator requirement.

The leads generator comes complete with all of the necessary files, database tables, and changes that need to be made to some of your existing PMD files.

To use the zip code radius in this mod, you must have a functional zip code radius module from PMD. If you do not have this module, the program can be run to search by location. The search can be modified to suit your needs. Please specify if you have the zip code module or not when ordering.

Now available for PMD Pro Series v1.x.x
