

Quick Statistics

Description:

Unique visitor counter and dynamic page counter

This mod is relatively easy to install. It takes between 15 to 20 minutes

The user online and visitor count are set at a 15 min cycle, this can be adjusted to suit.

The click count is a really handy feature. Know where your visitors are viewing or not viewing and where improvements can be made to link visibility etc.

Each page added to your pmd web site is also added to the stats table, automatically.

A side box code is available plus the 3 demo templates.

If you are visiting the user_viewing from here, you may need to refresh the page.

A back end, is now active. It is quite easy to add labels, adjust hide or show from within your pmd control panel

Now available for PMD pro series v1.0.1

Country: Manawatu
